TV STATIONS 1993

The Authoritative Reference for the Television, Cable & Electronics Industries

Published by Warren Publishing, Inc., 2115 Ward Court, N.W., Washington, D.C. 20037

Stations Volume No. ● 61 ● 1993 Edition

Only Comark has a transmitter with the future built in.

Think HDTV is a long way off? Not if you're considering a new UHF transmitter. In just a short time, you'll be required to simulcast NTSC and digital HDTV for a ten-year period.

The answer? Comark's **DUAL USE™** transmitter—the only system that operates with NTSC today and, in the future, can either be converted to D-HDTV or split apart into two systems—one for high efficiency NTSC and the other for

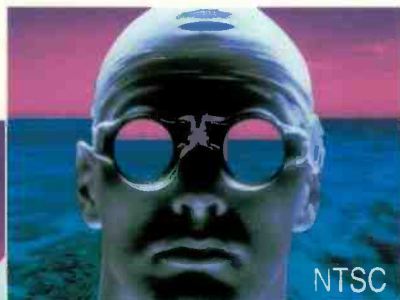

D-HDTV. It's an investment that pays off today and guarantees you'll be equipped to broadcast HDTV tomorrow.

For more information, or to request issues of our latest HDTV **TECH BRIEFS™**, call us today at (215) 822-0777.

Power and Performance from the New GEN III

Well Within Reach.

Easy operation has arrived with the Varian GEN III klystron high power amplifier for satcom applications. Behind the stylish exterior is an intelligent microprocessor control that lets you adjust and monitor all parameters from an easy-to-read menu-driven control panel. An integrated computer interface provides automatic level control and computer command of the HPA.

The GEN III also offers proven performance over a range of frequency bands, with a large selection of klystron tubes.

The GEN III meets the stringent international transmitter safety standard IEC 215 and accommodates worldwide line voltages with a simple internal adjustment.

And when it comes to service, the GEN III offers the best in the industry: 24-hour-a-day support and a 24-month warranty backed by Varian, the leader in satcom HPAs worldwide. For a free brochure, call 1-800-544-4636 in the U.S. or contact our Santa Clara, CA, headquarters.

Nature has its own professionals of sound and vision.

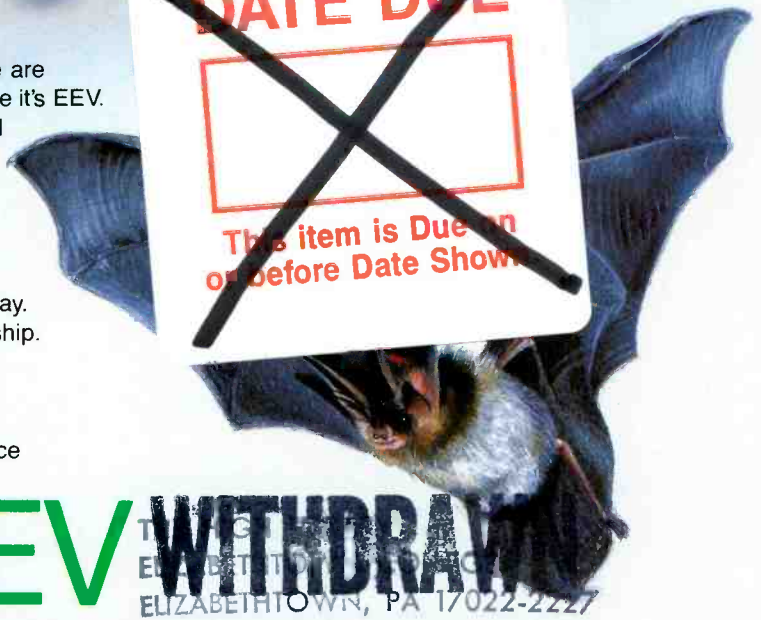

The wonders of sound and vision found in nature are hard to reproduce. In fact, if anyone has come close it's EEV.

Whatever your broadcast requirements, you'll find EEV has the technology to match. High-efficiency UHF Television Klystrons from 5kW to 70kW for Television Transmitters. A range of Broadcast Tetrodes and Vacuum Capacitors for AM and FM transmitters, and Leddicon® camera tubes to fit virtually every broadcast color camera available today.

Our experience is the key to technological leadership. Our manufacturing know-how ensures the highest quality and reliability. Above all, our professional dedication to our customers' needs makes us the natural choice of broadcasters the world over.

® Leddicon is the Registered Trade Mark of EEV Lead Oxide Camera Tubes.

- On mailing labels (Cheshire or pressure-sensitive)

No matter where
people live...

...ad agencies, managers, engineers,
and programmers can find them
market-by-market, by television
station or cable system or *both!*

Your ad message can reach these decisionmakers who rely on the

Cable & Station Coverage Atlas

It's been called the most important resource in the industry for locating cable systems within television signals. MSOs wouldn't be caught without one on their desk...even in their briefcase. And the general managers and engineers of television stations swear by it every single day of the year!

We're talking, of course, about the **Cable & Station Coverage Atlas**. *Television stations* need to know the cable systems operating within their signal area, and *cable systems* need to know the signals of TV stations. They are the prime users of the **Atlas**.

Ad agencies are *also* using the book to buy time without duplicating television and cable coverage. Equipment manufacturers use it to sell more efficiently to stations and cable systems. And investors, brokers and financiers know it offers the most complete data available to help them attract buyers and sellers.

Your advertising message in this important resource will reach the people you need to reach. People who use the **Atlas** to check television stations by market rank, cable communities by county and state, cable interconnects, Arbitron cable penetration data and FCC cable rules. If you know your buyers, you know they're using the **Atlas** as regularly as they are using their **Factbook**. The **Atlas** is the #1 book for coverage maps showing cable communities within television zones.

The industry's hottest references...the **Factbook** and the **Atlas**...are used by your clients and prospects. Shouldn't your ad message be a part of the books they see *every* day?

Look what you get as an advertiser!

- Complimentary *Atlas* for half-page or more of advertising
- Enhanced, bold-face listings free of charge
- First copies as they come off the press
- First refusal rights on same space the following year
- No billing until the book is published
- "Top of the List" consideration for premium positions
- Even lower cost if you also advertise in the **Television & Cable Factbook**

Can you afford *not* having your advertising message in it?

Call Gene Edwards, Advertising Sales Director, for a media kit and availabilities.

“...the most
authoritative
source.”

Darrel Cunningham
General Manager
KHBS-TV
Fort Smith, AR

Darrel is one of thousands of engineers, programmers, general managers and financial people who get and regularly use the **Television & Cable Factbook**.

Pictured above (left) with news director, Craig Cannon, Darrel told us, “Since we got our *SKYLINK* satellite news gathering vehicle, we talk to TV stations all over the country.”

Darrel and Craig are two of the most important decision makers in our business because they can say, “Yes, we’ll buy!”

KHBS-TV is one of hundreds of stations that use the Factbook. In fact, more than 4,31 different decision-makers and influencers refer to each **Television & Cable Factbook** 10:18 times every month. In other words, 23,705 top-level executives

will see your advertising message more than 241,000 times monthly! Over 63% are in upper-level management, and 30% have mid-level management positions.

Your ad in the **Television & Cable Factbook** costs about the same as those placed in weeklies and monthlies. Yet a single ad will represent your company over and over all year long.

If you want to reach the men and women who can say “Yes” to you, plan now to have a space like this in next year’s book while good positions are still available. Contact Gene Edwards, Advertising Director, for our media kit which will have all the details on our rates, availabilities and research. It’s not too soon to be planning for your ad in our next volume!

WARREN
PUBLISHING INC.

Television & Cable Factbook

Want to reach TV station people like these?

*Percent of station personnel regularly using the Factbook**

* Based on a survey of all commercial U.S. television stations conducted in Spring, 1992. Percentages greater than 100% due to multiple answers.

A recent survey of commercial television stations in the U.S., found that the **Television & Cable Factbook** is the preferred source for information about the television and cable industry.

How do stations use the **Factbook**? According to the study, they use it for compiling statistics and targeted marketing lists. It's the first place they look for addresses and phone numbers of suppliers and others in the industry. And they say it's the best place to find comprehensive Cable System Data, TV Station Data, Market Statistics (including special Arbitron compiled ratings), and has the most useful *Buyer's Guide*.

It's not surprising that television station people are among our biggest fans. Among all our subscribers, an average of 4.31 people use each **Factbook** 10.18 times every month. Nearly

80% have executive titles. More than 70% use the **Factbook** either daily or weekly, and 4 out of 5 purchase it every year. Most have been purchasing the **Factbook** for 10 years.

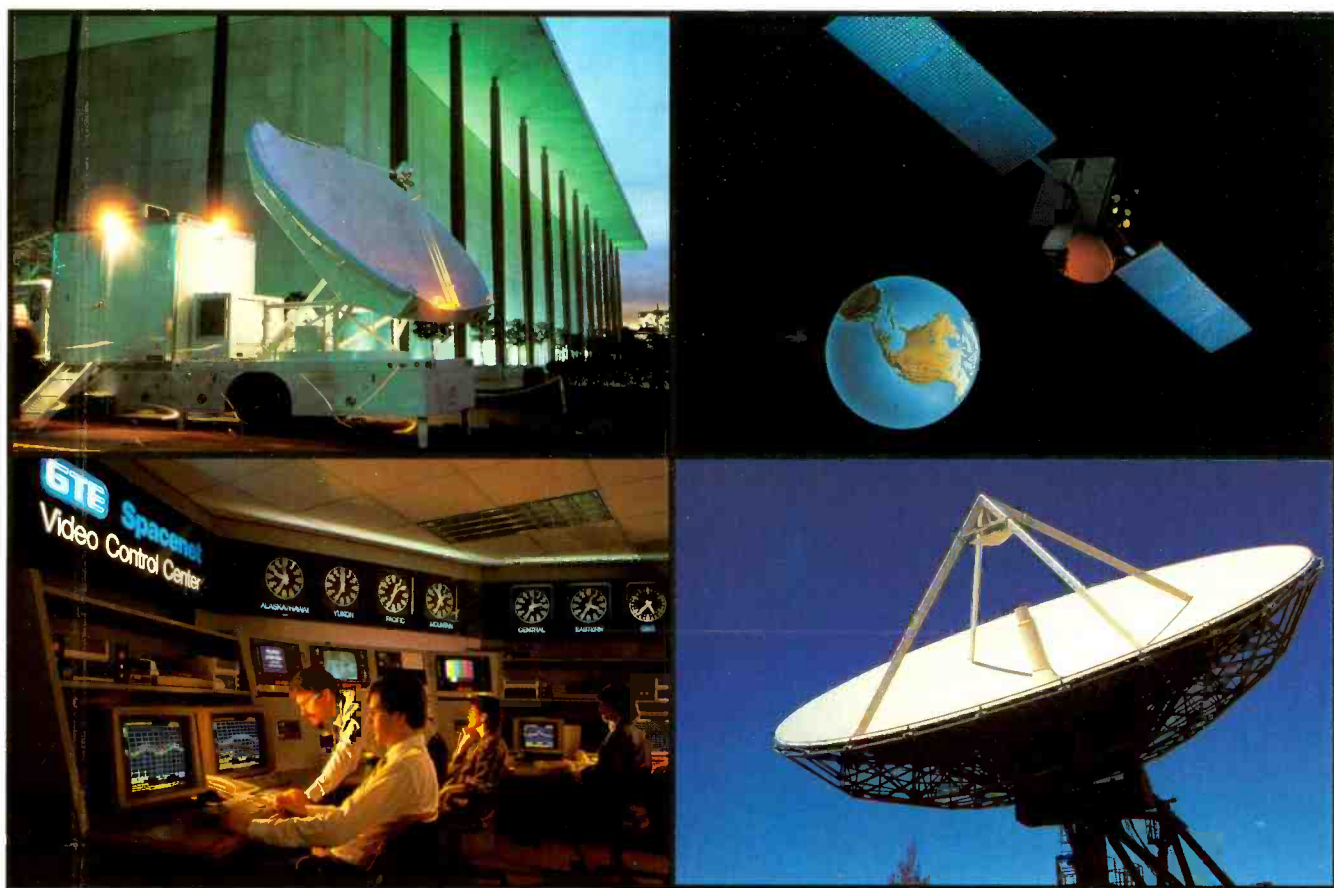

If you want to reach the station people who use the **Factbook** all year long, shouldn't this important resource be at the *top* of your media list? Not only will you reach television engineers, general managers, news, production and program people for 365 days with a single message, but your advertising will earn you *complimentary* copies of the industry's most respected resource.

Call our advertising sales director, Gene Edwards, and he'll send you a media kit that will tell you about the **Factbook**, the **Cable & Station Coverage Atlas** and all the publications that are essential tools for savvy television folks.

Television & Cable Factbook

Description of Station Directory Section

THE STATION MAPS

The only official and uniform rough guide to a station's physical coverage is found in the files of the Federal Communications Commission. Each TV station grantee is required to submit to the Commission its coverage contours predicted on the basis of engineering formulas designated by the Commission. The FCC specifies three grades of service as a general indication of the probable quality of reception.

The FCC does not intend or expect the predicted coverage contours, submitted by each station, to reflect whether a signal is received or not received at any specific location. Rather, the Commission regards the contours as a general guide to probable reception. The basic use made by the Commission of the contours is as a tool to determine where to allocate channels to minimize interference among stations.

Though all stations and applicants are required to submit predicted contours to the FCC, stations may also file contours based on actual measurements of transmitted signals. Under FCC rules, such filings are not mandatory, and only a relatively few stations have offered such measurements voluntarily. The Commission has no official and uniform rules for measuring service contours; such submissions are associated with stations' files but are not given official status by the Commission.

The maps are intended to serve as guides. It should be emphasized that the use of maps for legal proceedings, such as those before the FCC, may require precision greater than that reasonably obtainable in maps of the size employed in the **Factbook**.

The three grades of predicted contours required by the FCC are as follows:

Grade B Service: The quality of picture expected to be satisfactory to the median observer at least 90% of the time for at least 50% of the receiving locations within the contour, in the absence of interfering co-channel and adjacent-channel signals.

Grade A Service: Satisfactory service expected at least 90% of the time for at least 70% of the receiving locations.

Principal City Service: Satisfactory service expected at least 90% of the time for at least 90% of the receiving locations.

We obtained the predicted contour maps from the FCC files or from the stations. We publish two contour lines, "Grade A" and "Grade B."

ARBITRON TV STATION CIRCULATION

The counties listed on the station pages represent the home market Arbitron Metro area plus those counties in which the station receives a Net Weekly Circulation of at least 5% according to Arbitron circulation estimates. Each of these counties is then delineated by three circulation categories which include those in which the station's circulation is 50% or more, 25%-49% and 5%-24%. In some instances, counties listed do not appear on the maps, since the reduction in scale required to include them would impair the legibility of the maps.

The station circulation estimates which determined the allocation of each county to the proper category were derived from samples obtained over several survey periods. The estimates were based on Arbitron market surveys conducted during 1991 and 1992.

The Total Households and Television Households which are listed for each county qualifying for inclusion in one of the three circulation categories are current Arbitron projections as of January 1992 (see Definitions of Arbitron Terms).

Net Weekly and Average Daily Circulation totals for each station are based on the above surveys.

(Data from The Arbitron Company are fully protected by copyright. Reproduction in whole or part is prohibited without written permission from the The Arbitron Company, 142 West 57th St., New York, NY 10019.)

DEFINITIONS OF ARBITRON TERMS

Total Households—A household is a single dwelling unit, which may be a house, an apartment, or a group of one or more rooms. The total households figures shown in the current study are Market Statistics estimates projected to January 1, 1992 and rounded to the nearest hundred. These estimates include households on military installations.

Television Households—A television household is an occupied dwelling unit having one or more television sets. Updated estimates of TV households in each county are prepared annually by the Arbitron Research Department.

TV Penetration—The percent of total homes having one or more television sets at the time of the surveys. TV penetration uses current regional penetration estimates derived by the Advertising Research Foundation from U.S. Bureau of the Census surveys conducted in accordance with ARF specifications.

Net Weekly Circulation—The estimated number of different television households viewing a particular station at least once per week, Monday-Sunday, Sign-on to Sign-off.

Average Daily Circulation—The estimated average number of different television households reached by a particular station on each day of the week, Sign-on to Sign-off.

EDITOR'S NOTE: Total Households listed for each station in this Volume of the **Television & Cable Factbook** do not include households in any county in which the station's circulation is less than 5%. The counties appearing in the circulation report are listed alphabetically by state. The states are arranged alphabetically by two-letter state abbreviations.

SURVEY METHODS, DESCRIBED BY ARBITRON

Arbitron uses one-week, interviewer-supervised family viewing diaries to secure information for television audience estimates. Families are contacted initially by mail to inform them of their selection for the survey. They are then contacted by telephone to secure their cooperation in the survey and to elicit basic information as to television set ownership and number of sets owned in the household. Contact is maintained with the sample families through followup calls to encourage proper recording and prompt return of the diaries.

Sampling is controlled by geographic units of no larger than county size, and in some instances for reasons of population distribution, terrain or technical control a county is divided into two sampling units. Sample homes are selected by computer from all available households with listed telephones in the sampling universe through a systematic interval selection technique with random selection occurring within each interval.

In the Metro and ADI Rating Area, households with unlisted telephones are included in the sample universe by using a list of potential telephone numbers. Known listed numbers, business numbers, nonresidential business exchanges and unassigned number blocks have been eliminated.

The Arbitron family viewing diary measurement technique is used for both market surveys of television viewing and broadscale station circulation information by county.

At least four times each year, Arbitron surveys every county to provide viewing information for every television market in the country. Further details on Arbitron sampling procedures are available from Arbitron.

use at the time this Factbook was published. "Docket" numbers are used in those few cases where the application was in a hearing status and a file number had not been assigned. The "granted" date indicates when the FCC approved construction of facilities involved.

EXPLANATION OF FCC SYMBOLS

FCC Filing Symbols:

- 1. BPCT: Broadcast Permit Commercial Television.
- 2. BMPCT: Broadcast Modification of Permit Commercial Television.
- 3. DOC: Docket (designation applied by FCC to hearing cases).
- 4. GRANTED: Date of authorization by FCC.

Note: "BPCT" and "BMPCT" designations, accompanied by numbers, are affixed by the FCC to applications for new or changed station facilities to identify each when it is accepted for filing. They therefore constitute file numbers. Each map in the Factbook is accompanied with its file number to facilitate reference to the Commission's official files. In each case, the file number used is the one affixed to the application for facilities which were subsequently authorized by the FCC and in

After a station is completed according to the terms of its construction permit, it receives a license; this is identified by a number with a "BLCT" (Broadcast License Commercial Television) prefix. When a license is renewed, a number with a "BRCT" (Broadcast Renewal Commercial Television) prefix is employed. Applications for licenses or license renewals do not include requests for changes in facilities, thus do not affect predicted Grade A & B contours. Therefore, they are not employed as references in the Factbook.

The Grade A & B contours on the maps are predicted by station engineers according to the formulas designated by the FCC, as previously explained. They are based on facilities authorized or in use by stations at the time of Factbook publication.

Latitude and longitude coordinates on the Station pages are taken from the FCC's official files. They currently are based on the North American Datum of 1927 (NAD 27). In 1993, the FCC will begin converting records to reflect the North American Datum of 1983 (NAD 83). The Factbook will continue to accurately reflect the data as on file at the FCC.

U.S. Television Station Directory

Data updated to November 1, 1992 unless otherwise indicated. Includes rate digests, personnel, facilities and other data.

THE STATE PAGES

Following the map of each state, rankings for Arbitron's Area of Dominant Influence Television Households are shown. ADI Household Rank is established by Arbitron.

The state pages also carry additional cross-reference material, indicating for example, those stations within the state that are identified with two or more cities, or with cities in another state.

Operating commercial and educational TV stations by VHF and UHF are shown for each state in a status report as of November 1, 1992.

STATION PAGES

Rates, personnel and other data supplied by stations.

RATE DIGESTS: These show only the highest one-time rate charged by the stations. Most rates are also subject to frequency discounts, separate or additional rehearsal charges, talent & production charges, etc. For further details and for contract conditions, specifications etc., consult complete station rate cards available from the stations on request.

STATION POWER: Powers shown are Effective Radiated Powers (ERP).

NETWORK SYMBOLS (registered trademarks):

The individual station tables show a complete listing of all counties grouped by Arbitron Net Weekly Circulation levels, with Total Households, and TV Penetration in each County individually. For definitions of Arbitron terms, see Introduction.

SATELLITE STATIONS are shown with a dash line pattern in relation to the parent listing. In the satellite listing the parent station is shown with a dash line pattern.
