Preface

This book has been prepared from official FCC information and government publications from the neighboring countries. Every effort has been made to make it as complete, accurate, and easy to use as possible. All television, fm, and a-m stations in the United States, as well as Canada, Cuba, Mexico, and the West Indies, are indexed by geographic location, frequency, and call letters. A guide to the use of this book is included immediately following the table of contents (p. 5) and at the end of the book.

In nearly all countries each radio and TV station is identified by its call letters, such as WWLB. In the United States, call letters are assigned to broadcasting stations by the Federal Communication so that duplications are avoided. In other countries similar agencies allocate them. By international agreement blocks of call letters are assigned to the various countries.

The frequency of an a-m or fm station is sometimes used as an aid to identification of the station. It is assigned by a governmental body to permit maximum utilization of the radio spectrum with minimum interference. For North American a-m stations, frequencies range from 535 to 1600 kilohertz (one kilohertz equals 1000 cycles per second). For North American fm stations, frequencies range from 88.1 to 107.9 megahertz (one megahertz equals 1,000,000 cycles per second).

The antenna height listed for fm stations is the elevation above average terrain (from two to ten miles from the antenna). Thus some antenna height listings are negative, meaning the antenna is below the average terrain level. In general, as the height of an antenna is increased, the distance at which the station may be received is increased.

The power of a station is a measure of the strength of the station's signal. The greater the power of a station, the greater is the distance at which the signal may be received. Due to changes which occur in the ionosphere, radio signals are reflected back to earth at night and may cause interference with other stations. Consequently, most stations are required by the government either to decrease their nighttime power or to operate during daytime only.

All stations currently on the air, plus those which have temporarily ceased operation and those which plan to start within the next year, are included in this book. Frequency, power, and network affiliation are given for each station. In addition, fm stations broadcasting stereo are indicated. Thus, regardless of where you travel, by consulting this handy book you can select those stations providing stereo.

The completely integrated alphabetical call-letter listing of all television, fm, and a-m stations is an important feature of this book. It provides a comprehensive one-source reference to all commercial broadcast stations of North America.

While the information for each station has been checked and rechecked, and the entire list is computer-compiled to insure even greater accuracy, errors are inevitable in a work of this magnitude. I welcome any corrections or comments from users.

VANE A. JONES

Symbols and Notes

STATION NOTES

- ✦ Station not currently on the air.
- ✧ Station equipped to broadcast stereo.
- ✪ Information scheduled to change.
- ★ Educational station.
- Station shares transmitter and time.
- Station shares time with another station.

POWER NOTES

- g Temporarily operating with 100 watts power.
- p Temporarily operating with 250 watts power.
- q Temporarily operating with 500 watts power.
- r Temporarily operating with 1000 watts power.
- t Temporarily operating with 2500 watts power.
- u Temporarily operating with 5000 watts power.
- v Temporarily operating with 10,000 watts power.
- w Temporarily operating with 25,000 watts power.
- j Temporarily operating with 50,000 watts power.

SCHEDULE NOTES

- c Temporarily does not operate at night.
- d Daytime only.
- f Limited time operation.
- h Station uses higher power nights.
- k Temporarily operating with lower power.
- n Station operates nights only.
- Less power during dark hours.

NETWORK CODE

- A American Broadcasting Company—TV Network.

North American RADIO-TV STATION GUIDE

EIGHTH EDITION

by Vane A. Jones

This handy book contains listings for all the radio and television stations in the United States, Canada, Mexico, and the West Indies—nearly 10,000 stations in all. The over 5500 a-m stations, over 3000 fm stations, and nearly 1200 television stations presently in operation, scheduled to start operation soon, or temporarily off the air are each listed in three ways—by geographical location, frequency (or channel), and call letter.

This book is more than just a listing of stations, however. Important statistics such as power (day and night), height of antennas, and sharing of time with other stations are given. Also listed is the network affiliation for each station. Educational stations are designated, as are fm stations broadcasting stereo.

Regardless of your interest in radio and television, this book is a must for you. If you are traveling, it will list the stations broadcasting your favorite network in the area—or tell you what stations are in the city or state you are in. If you enjoy pulling in distant stations (DX'ing), this book will quickly help you identify each signal. For the radio and television time buyer, and others engaged in broadcasting activities, this book serves myriad uses. Each entry has been checked and re-checked and the book listings computer-compiled, making this the most accurate and up-to-date guide available.

ABOUT THE AUTHOR

Vane Jones is engaged in many activities, but his first love is this book. Whenever possible, you will find him in his study, with a television set and two or three radios all operating at once. He can recite call letters and tell you the history of stations by the hour. He has prepared nine previous editions—the first was published in 1958 as a result of his DX'ing activity. With each edition, his list of followers grows, primarily because of the personal attention he gives each entry and the hairline accuracy for which he is famous.
